Reasons For Allowance

The prior art of record does not disclose or fairly suggest an apparatus and method for stabilizing a base optical axis of an eye comprising an optical means for identifying a base point of the axis and a movable illumination means for causing the eye to move from one orientation to a different orientation, thereby stimulating saccadic movement and its resulting latency period during which the base point is stabilized. The apparatus claim is interpreted under 35 USC 112, Sixth paragraph as a proper "means for" claim, in that the illumination means requires a specific response, from the eye, as it is moved.
